GEOTHERMAL HEAT PUMPS

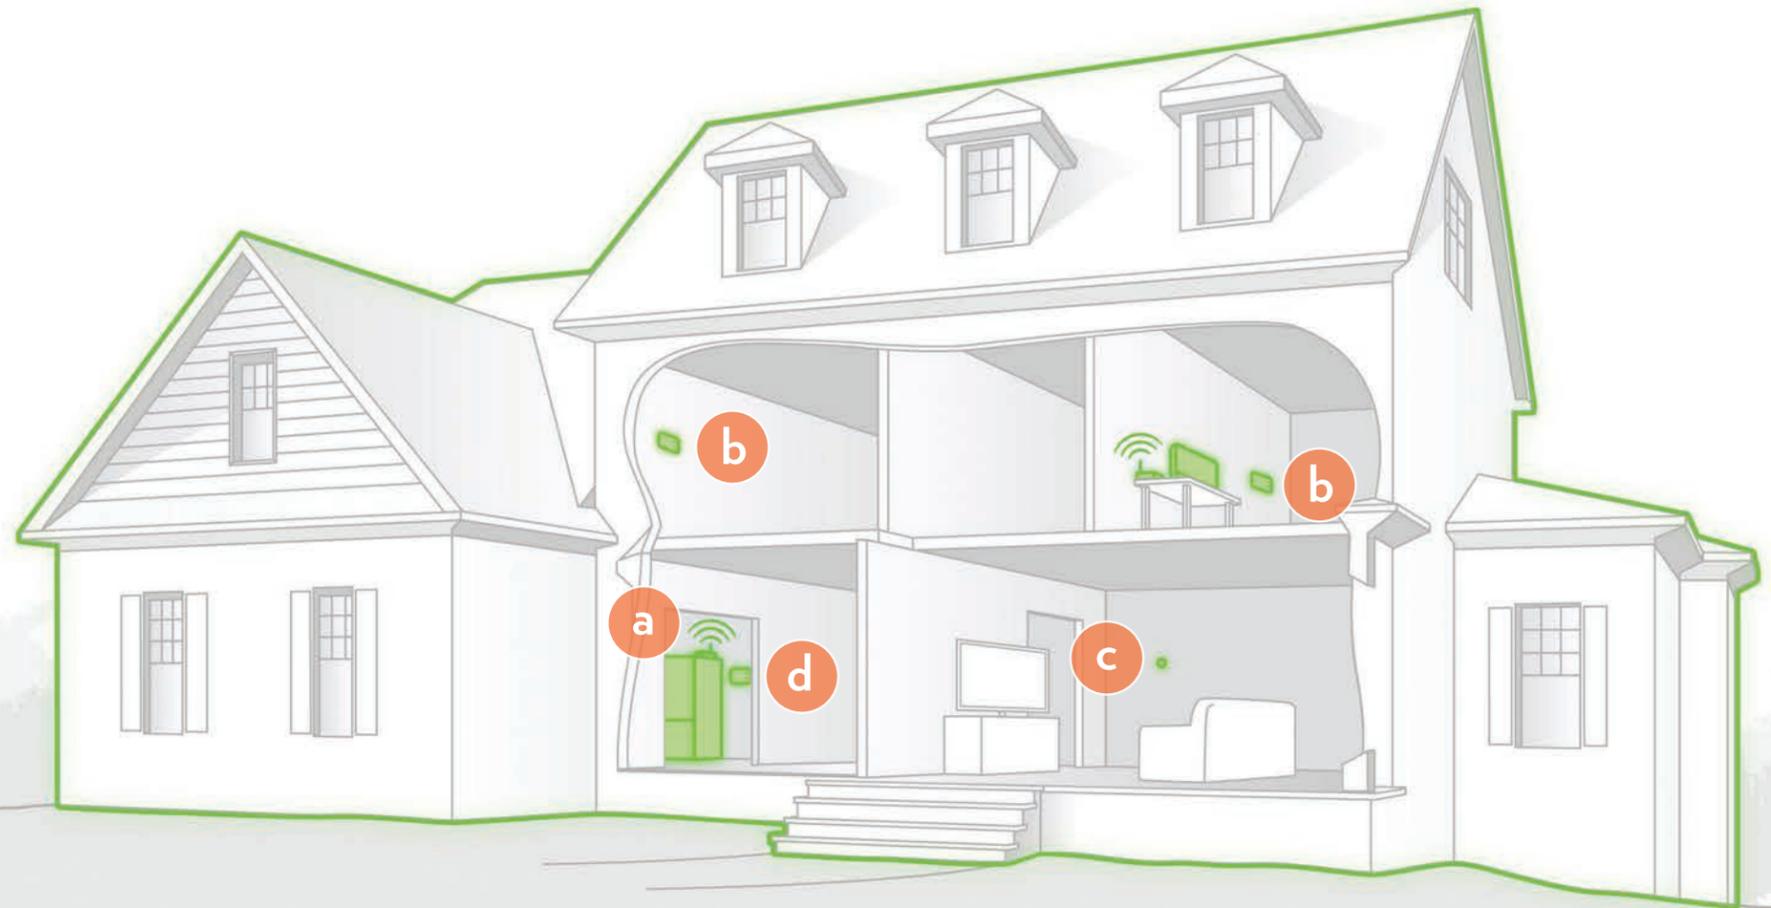

Everything in harmony

Imagine a platform that lets you control the comfort of your home from anywhere and can provide real-time detailed feedback of your comfort system from any web-enabled smart phone, tablet, or computer. Now, imagine being able to share relevant system information directly with a technician, potentially giving them the power to conduct diagnostics and troubleshooting remotely, without necessitating a home visit.

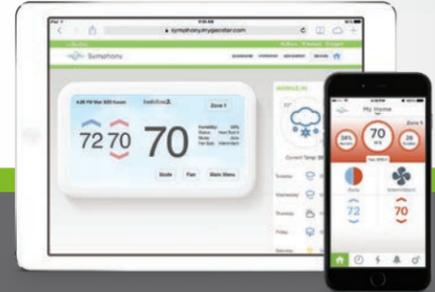

That's Symphony.

Symphony is a Wi-Fi based comfort platform that's compatible with all Magnolia, Aston and Aston Advanced Series and water to water GeoStar geothermal products. Symphony is unsurpassed in its ease of use, feature set and the level of information it provides. Symphony marries the Aurora controls of a GeoStar geothermal system with our WebLink router, giving you access to the comfort system from practically anywhere. Symphony is cloud-based so there's no software to install and provides control over the entire geothermal system—not just the temperature as in other 'smart thermostat' systems.

Aurora WebLink

The Aurora WebLink router allows Symphony to communicate directly with our Aurora control board, unlike other systems that only talk to the thermostat. This provides you and your dealer with access to unit sensors, energy use and system information rather than the limited information a typical thermostat sees.

Symphony Thermostats

An internet-enabled thermostat allows homeowners to change temperature, set a schedule, monitor vacation mode, and more via smartphone, tablet, or computer. Connect to the personalized Symphony dashboard for remote functionality—all from the comfort of your sofa.

Invisible Thermostat Capability

The concept of a dedicated thermostat is becoming outdated. If you'd rather not have a thermostat cluttering your walls, install an invisible flush-mount 'mud-in' temperature sensor (pictured above) and use Symphony to control your home comfort levels through any smartphone, tablet, or computer.

Optional Feature

Advanced Zoning System

Remotely control temperatures and programs in up to six areas of your home with our IntelliZone2 zoning system. GeoStar is the only geothermal manufacturer to offer its own zoning solution, and now we're the only ones with online control through Symphony.

Optional Feature

Symphony Dashboard

The personalized dashboard provides quick access to your system's settings, operational status and history, alert history, energy usage, and zone temperatures as well as local weather.

Accessible from anywhere

Symphony benefits

Energy Monitoring

Symphony gives you the power to monitor and track your unit's energy use instantaneously or as a daily, weekly or 25-month history. Graphs give you the power to track trends visually and the information you need to reduce consumption even further. Make tweaks to your zoning or main thermostat and watch the effect on your bills!

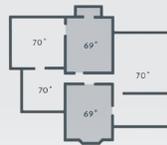

Monitor a Second Home

Symphony has the capability to monitor multiple units in multiple locations. This means you can monitor a second home and its local surrounding weather from miles away. Symphony can even send a notification to you when power is off at the home. Your installing dealer will also be able to monitor your heat pump operation remotely as well.

Peace of Mind

Symphony can provide equipment alerts and service reminders via email, text message, and in-app notifications. And, not only will you receive alerts—so will your HVAC contractor via the Symphony Contractor Portal. A service tech can log into your system to view faults, operating conditions and sensor readings—all without having to visit the home. If a service call is needed, the contractor can begin working on the solution immediately—saving you valuable time.

Zoning System

With the optional IntelliZone2 zoning system, you can precisely regulate temperatures in up to six areas of your home. Gone are the days of needing to endure a hot upstairs bedroom or being forced to heat a guest bedroom that's only used during the holidays.

In-house Development

Symphony was developed in-house and was engineered specifically to control GeoStar geothermal systems. Symphony is compatible with Magnolia, Aston and Aston Advanced Series and water to water GeoStar geothermal products. That means it's custom-tailored for your unit and isn't reliant on a third party for additional development or changes.
